Blindley Heath

Key considerations for this location*

• Mitigation for the A22 and rural road network would be needed along with public transport improvements.

• Land assembly and landscape impact to the east, need to be better understood.

• Flood zone in the south of the area would need to be mitigated/avoided.

• Likely to commence within years 6-10 from adoption of the plan.

• Is entirely within the district and relatively centrally located with more opportunity to benefit the wider district in terms of transport improvements and service provision.

* The considerations listed are not exhaustive
